  iris$Sepal.Width,
  main = "Iris Dataset",
  sub = "Sepal width and length",
  xlab = "Sepal Length (cm)",
  ylab = "Sepal Width (cm)",
  pch = 21,
  col = iris$Species,
  bg = iris$Species,
  cex = 1.5
)
```

Iris Dataset

Sepal Length (cm)
Sepal width and length

f The scatterplot depicts the relationship between Sepal.Length and Sepal.Width for three iris species: setosa, versicolor, and virginica. Setosa is clearly clustered in the lower left quadrant, with smaller dimensions, distinguishing it from the other species. Versicolor exhibits a broader range of sizes, overlapping with virginica, which generally has larger measurements. 7. a
